

Working Deeply with NVivo

Develop deeper analytical capability and structured approaches to complex NVivo projects. Learn how to explore patterns in your coding, visualise insights from your data, and apply more advanced NVivo tools in your research.

Module One – Working with Cases, Classifications and Structured Data

Organise and structure more complex research projects in NVivo.

This module introduces tools that help you organise participants, data and contextual information within your project. You will learn how to work with cases, classifications and attributes, and how to import and analyse structured data such as surveys or social media.

What we will cover:

- **Recap and questions from Working Confidently with NVivo**
A review of the content covered in Working Confidently with NVivo course with an opportunity to ask questions and/or recap any area
- **Classifying and Grouping Your Data**
Introducing Cases • Classifications and Attributes • Introducing Sets
- **Working with other data**
Importing and working with surveys & social media
- **Working on your project with expert help**
Apply the tools learned directly to your own research project, with guidance and feedback to help you work confidently and effectively with your data.

Module Two – Exploring Your Coding

Use NVivo’s analytical tools to investigate patterns within your coded data.

This module introduces query tools that allow you to explore relationships within your coding and compare themes across groups or datasets. You will learn how matrix, crosstab and coding queries can help you examine patterns in your data and develop deeper analytical insights.

What we will cover:

- **Recap and questions from Module 1**
- **Exploring Your Coding**

Using Crosstab, Matrix Coding & Coding queries

- **Working on your project with expert help**

Apply the tools learned directly to your own research project, with guidance and feedback to help you work confidently and effectively with your data.

Module Three – Visualising and Reporting Your Analysis

Explore ways to visualise your analysis, communicate findings and work collaboratively with NVivo.

This module introduces tools that help you visualise connections within your data and share insights with others. You will learn how to build visual models, create reports and manage NVivo projects within research teams, including strategies for collaborative workflows and project management.

What we will cover:

- **Recap and questions from Module 2**
- **Linking and Visualising Your Data**
Relationships and Links • Building and working with maps
- **Reporting and Exporting Your Data**
Creating Reports • Exporting Files and Codes
- **Teamwork with NVivo**
“Master” project design • Project Protocol • Process management • Strategies when using standalone versions of NVivo • Strategies when using NVivo Collaboration Cloud • Merging NVivo projects • Coding comparison query
- **Further Resources**
Online help • Consultancy
- **Working on your project with expert help**
Apply the tools learned directly to your own research project, with guidance and feedback to help you work confidently and effectively with your data.
